TRIO GLOBAL

PROJECT OVERVIEW · NOVEMBER 2026

Trio Token

A digital token on the Polygon network, with its token details, contract, and project-stated liquidity arrangement.

Trio Group Limited
Described by the project as a UK-based

www.trioglobal.uk

PROJECT OVERVIEW

One token, written rules, a staged plan

WHAT TRIO IS

A crypto network built around one token, TRIO, with its rules written down.

A member gets an ID. The ID holds a package. The package mints and vests TRIO. The card and the chain, when they ship, are meant to use that same ID.

Today

LIVE

TRIO is a token on Polygon. The live stack is the token, package vesting, a USDT/TRIO swap, and the member site.

Next in the plan

PLANNED

A Trio Card spend layer and merchant acceptance. Not live; issuer, regions, and fees are to be published first.

Longer term

PLANNED

A Trio blockchain as a later settlement layer, with Polygon kept as a bridge. Not live.

GENERAL EXPLAINER

Four ideas behind a digital token

Blockchain

A shared ledger kept by many computers. Entries are added in blocks and are very hard to change once recorded.

Token

A digital unit recorded on a blockchain. Its rules, such as total supply and divisibility, are set by a smart contract.

Smart contract

A program published on a blockchain at a fixed address. Anyone can inspect its address and recorded activity.

Wallet

Software that holds the keys to a blockchain address. It is how a person holds, sends, or receives a token.

Smart contract defines the token → Blockchain records every transfer → Wallets hold balances → Explorers make records public

POLYGON TECHNOLOGY

Where the Trio token lives today

POLYGON NETWORK

Public, independently operated network

Trio token contract

`0x65ba…cfb8`

Deployed by the project on Polygon. Records TRIO balances and transfers.

Wallets

Explorer (Polygonscan)

Other apps

What Polygon is

A public blockchain network that works with Ethereum-style wallets and tools. It is built and operated independently of Trio.

How Trio relates

Trio is a token published on Polygon. Trio does not own or operate Polygon, and does not run a chain of its own today.

Why Polygon (project's view)

The source describes Polygon as the right place for the current contracts: liquid, low-cost enough, and widely supported by wallets.

PROJECT-STATED

Token details

TOKEN NAME	TOTAL SUPPLY	DECIMALS	NETWORK
Trio	**7,200,000**	**18**	**Polygon**
Unit referred to as TRIO in project materials	Fixed figure stated by the project	Smallest unit is 10^{-18} TRIO	Polygon PoS, an EVM-compatible network

What “18 decimals” means

A token’s balance is stored as a whole number. With 18 decimals, 1 TRIO is recorded as 1 followed by 18 zeros, so the token can be divided into very small fractions. Wallets and explorers convert this back to readable amounts. It does not change the total supply.

Verification status

These figures are as stated by the project. They were independently checked on Polygonscan for this deck. The contract page on the next slides is where anyone can compare them.

SMART CONTRACT

The Trio token contract on Polygon

POLYGON NETWORK

TOKEN CONTRACT ADDRESS

`0x65baa4fa2bb4f702dad3e0d271317618c996cfb8`

polygonscan.com/address/0x65baa4fa2bb4f702dad3e0d271317618c996cfb8

1 Open the explorer link

Use the Polygonscan link above, or type the address into polygonscan.com.

2 Compare the full address

Match every character, not just the first and last few. Look-alike tokens exist.

3 Check token details

On the token page, compare name, total supply, and decimals with the figures in this deck.

FROM SOURCE DECK

Token Mechanics

Issuance

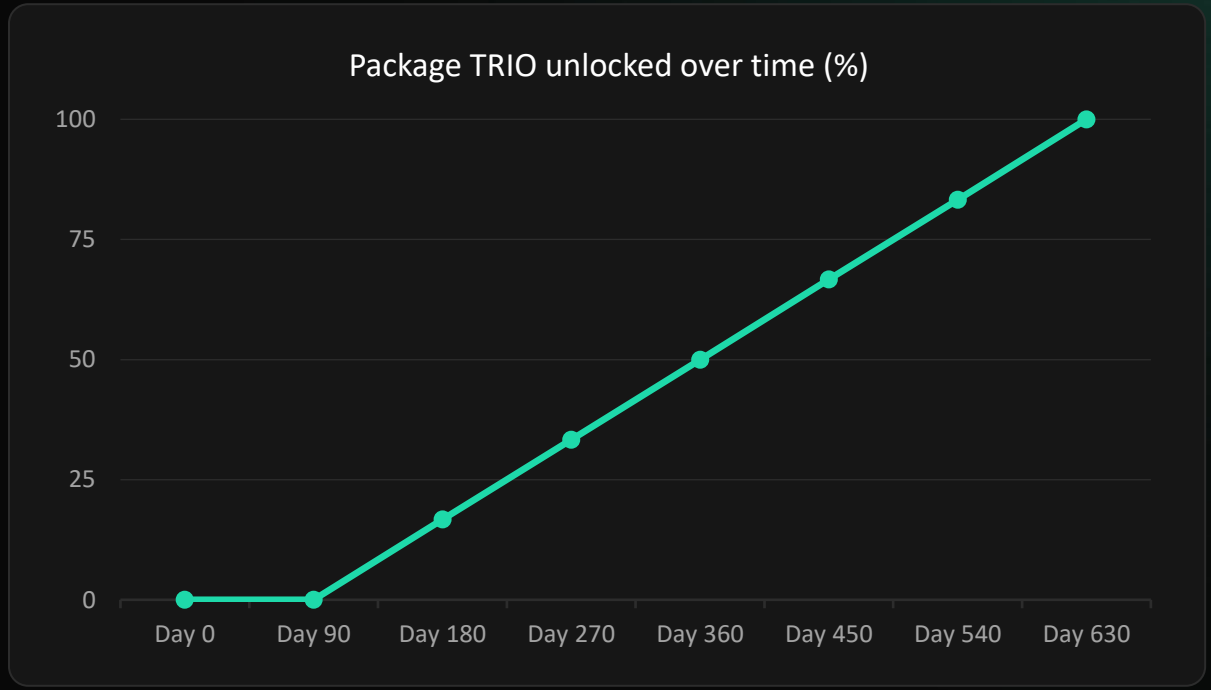

The source deck says TRIO comes into existence as packages are activated, and that a reserve is held for payouts. It describes this as not a premine.

Vesting

TRIO from a package is locked for 90 days. After that cliff, it unlocks in a straight line over 540 days, so release completes on day 630.

Swap

Members can move between USDT and TRIO on the project's published market. TRIO bought there follows the lock rules for market buys.

Derived directly from the stated schedule: 0% to day 90, then linear to 100% at day 630.

CONFIRMED

Allocation breakdown is supplied. Minting on package activation fits the stated 7,200,000 total supply, and the 7,200,000 TRIO tied to liquidity.

LIQUIDITY MANAGEMENT

Project-stated Trio Token liquidity

PROJECT-STATED · NOT INDEPENDENTLY VERIFIED

82,000 SOL

Solana liquidity balance stated by the project as Trio Token liquidity

7,200,000 TRIO

Trio amount the project associates with this liquidity

Stated purpose: to support liquidity management and market-rate management. This is the project's stated aim and guarantee of price stability or performance. Price or valuation is derived from these figures.

Liquidity provider listed by the project

The Polygon contract does not run on Solana. The source deck documents no bridge, wrapped token, or Solana version of TRIO. Its only bridge mention is a planned link between a future Trio chain and Polygon.

FROM SOURCE DECK

How participation is documented

01

Connect a wallet

A person creates or connects a wallet and registers. Registration binds that wallet to one member ID.

02

Choose a package

Packages are set in multiples of 90 USDT. A package is how new TRIO is issued to a member.

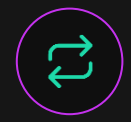

03

TRIO vests

Package TRIO is locked for 90 days, then released in a straight line over 540 days.

04

Hold or swap

Members can hold TRIO or move between USDT and TRIO on the published market.

Participation is voluntary and carries profits. promises a return, a rising token price, or that a package will return more than it cost.

WHO IT IS FOR

FROM SOURCE DECK

Who Trio is for, and who it is not for

Individuals and everyday people

People who will read a plan before they send USDT.

Token holders

Members who want a token they can hold under a known vest, not a balance that only exists on a private server.

LATER

Entrepreneurs and business builders

Later, people who want to spend TRIO without leaving the brand, and businesses that would rather accept a Trio payment than explain a new coin at the till.

NOT A FIT FOR

Anyone looking for a slow Income

It is a poor fit for anyone looking for a fixed salary, or a card they can order today. The card and the chain are still ahead.

TECHNOLOGY AND OPERATIONS

What runs today, and how it operates

LIVE COMPONENTS

Token contract

TRIO on Polygon

Vesting contract

Package lock and release

Swap

USDT and TRIO on the published market

Member site and admin

Accounts, ledger lines, reporting

HOW IT OPERATES (FROM THE SOURCE DECK)

The wallet is the account

Registration binds a wallet to one member ID. The card, later, is meant to be bound to the same identity.

Settlement on Polygon

Package purchases, token vesting, and claims settle on Polygon.

Two lock rules

Package TRIO follows the 90-day cliff and 540-day release. TRIO bought on the market follows the lock rules for market buys.

Read the address, not the name

Members should read the published contract addresses before they send funds. The marketing name does not replace the address.

PRINCIPLES

FROM SOURCE DECK

Four rules the project sets for itself

01

Publish the number before the sale

The plan’s figures are the product. If they change, the change is published. They are not whispered.

02

One ID, same member

Package, claim wallet, and later the card all hang off the same member.

03

Do not ship the chain to escape the present

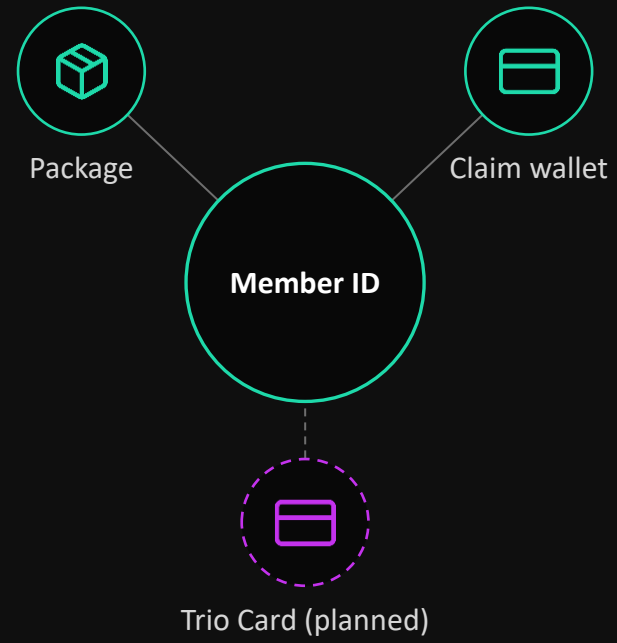

Polygon is the live home until the Trio chain is actually better for members.

04

Do not ship the card as a picture

Ship it with an issuer, a region, and a fee table.

ONE ID, SAME MEMBER

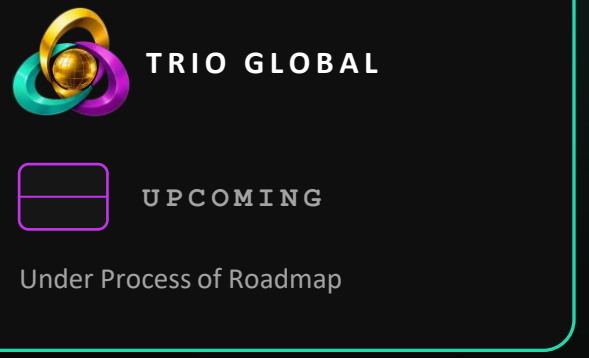

TRIO CARD

The planned spend layer

The Trio Card is the spend layer. It is going live. The source calls it the next consumer product on the roadmap: a card a member loads or links value to, then uses at a merchant or an ATM where the network allows.

WHAT THE CARD IS MEANT TO DO

01	Carry the Trio name, so the member’s ID and the plastic are the same brand.
02	Spend TRIO at the rates and limits published when the card opens.
03	Work on the familiar card rails first, so merchants do not need a new terminal on day one.
04	Show the spend in the same account the member already uses.
05	Start in a limited set of countries and expand. Availability will follow licensing, not a slogan.

What the card will not pretend to be

On the day it is announced: a bank, a credit line, or a guarantee that every country can issue plastic in the first week. Issuing a card is a regulated activity. Trio will publish the issuer, the regions, the fees, and the supported assets before the first card is shipped. Until that notice, the card is a plan, you can order.

ROADMAP

A sequence, not a set of dates

The source: “Dates move if the work moves. The order does not.” Only the first stage is live.

NOW

Live network

TRIO on Polygon, package vesting, swap, member site and admin.

LIVE

NEXT

Depth on what is live

Clearer reporting, more regions, contract addresses kept current, education.

PLANNED

THEN

Trio Card

Choose issuer and first countries; publish fees and limits. Pilot first.

PLANNED

THEN

Merchant acceptance

A simple way for businesses to accept card payments and hold or convert TRIO.

PLANNED

THEN

Trio blockchain

Public test network first, with a bridge design to Polygon.

PLANNED

AFTER THAT

One account

Token, card, and later chain activity under one member ID.

PLANNED

TRANSPARENCY AND RISKS

What the links show, and what they do not

LINK	CAN SHOW	DOES NOT SHOW
Polygonscan	✓ The contract exists at this address; its on-chain supply, decimals, holders, and transfers.	✗ The project, an audit, code safety, a price, or any reserve.
SolanaBeach	✓ A Solana validator's account, its total stake, and its performance.	✗ That the SOL belongs to Trio, or forms a TRIO pool. Validator stake often includes others' delegations.
GERSIA website	✓ GERSIA's own description of its services.	✗ The Trio arrangement itself, its terms and the reserves held.

KEY RISKS

- ⚠ Audit is documented
- ⚠ Liquidity and reserves are independently verified
- ⚠ Polygon–Solana link already confirmed
- ⚠ Token value can fall
- ⚠ Smart contract not change
- ⚠ Regulatory status stated

KEY TAKEAWAYS AND NEXT STEPS

Summary

Trio is a token on Polygon

7,200,000 total supply and 18 decimals, as stated by the project.

Package TRIO vests

A 90-day lock, then straight-line release over 540 days.

Liquidity is project-stated

82,000 SOL and 7,200,000 TRIO, with GERSIA listed as provider.

Card and chain are plans

Only the token, vesting, swap, and member site are live.

SUGGESTED NEXT STEPS FOR THE PROJECT

- Confirm how the Solana liquidity relates to the Polygon token
- Publish evidence of the liquidity arrangement and its ownership
- Company registration and regulatory details
- State whether the contract has been audited

AFFILIATE PLAN

TRIO Referral Plan

THE REDESIGNED PLAN

Affiliates earn a commission when a customer they referred stakes a TRIO

This plan replaces the earlier income programme. Its fixed daily returns, package yields, level and binary payouts, ranks, clubs and loyalty pool are the part of it.

01 Guaranteed returns

Fixed, daily or promised income of any kind. What an affiliate earns depends only on the stake they help make.

02 Paid from TRIO Stake

Every commission is a share of the price an end user paid for an eligible product or service.

03 Recruiting and Deposits

No pay for sign-ups, deposits,, or for building a downline.

All rates, ranks and figures in this section for education only.

AFFILIATE PLAN

How a TRIO is Earned

01

Share a link

The affiliate shares a personal referral link or code. Joining as an affiliate is free.

02

Stake a TRIO

An end user staked an eligible TRIO at the published live price.

03

Get Principal TRIO

The TRIO Token will transfer to user's personal wallet and locked for 630 days.

04

Get ROI

Paid Daily, in the TRIO Token. Principal will start releasing after 90 days.

$90.00

MINIMUM REQUIRED TO START STAKE
(UNSTAKE START AFTER 90 DAYS)

0.27%
PER DAY (FOR 630 DAYS)

8.10%
PER MONTH

RESTAKE BURNING: On every Re-Staking 100% Trio Tokens are burned forever.
